**ISBN:** 9780852960134

This book covers the development of electric cars -- from their early days to new hybrid models in production -- together with the very latest technological issues faced by automotive engineers working on electric cars, as well as the key business factors vital for the successful transfer of electric cars into the mass market. Considerable work has gone into electric car and battery development in the last ten years with the prospect of substantial improvements in range and performance in battery cars as well as in hybrids and those using fuel cells. This book comprehensively covers this important subject and will be of particular interest to engineers and managers working in the automotive and transport industries.

Also available:

Propulsion Systems for Hybrid Vehicles - ISBN 9780863413360

Local Energy: Distributed generation of heat and power - ISBN 9780863417399

The Institution of Engineering and Technology is one of the world's leading professional societies for the engineering and technology community. The IET publishes more than 100 new titles every year; a rich mix of books, journals and magazines with a back catalogue of more than 350 books in 18 different subject areas including:

- Power & Energy
- Renewable Energy
- Radar, Sonar & Navigation
- Electromagnetics
- Electrical Measurement
- History of Technology
- Technology Management
