Sinopsis

ISBN: 9780321409706

Do you spend too much time doing repetitive production tasks such as placing and replacing images, resizing them, dragging them from one document to another, and preparing images for printing instead of being creative? Do you use Adobe Photoshop CS2 and have some experience with scripting? You're in luck. Since Adobe Creative Suite 2 was created with built-in support for scripting, virtually every repetitive or time-consuming task that creative professionals have to do in the Adobe Creative Suite can be streamlined with the help of a script. This book describes how to use JavaScript to manipulate and extend Adobe Photoshop within Adobe Creative Suite 2, and provides reference information for the JavaScript objects, properties, and functions defined by Adobe's applications. Now available in print for the first time, this scripting reference provides the information experienced JavaScript users need to create custom scripts for Photoshop, whether you're looking to automate Camera Raw options and settings, automatically resize and export large batches of images into your page-layout application, or want to automatically add metadata, like a copyright notice, to selected image files. These are just a few examples of how you can use Photoshop CS2's built-in scripting capabilities to save you from hours of repetitive tasks.
