Sinopsis

ISBN: 9780262572392

In recent years, advances in biological science and technology have outpaced policymakers' attempts to deal with them. Current Controversies in the Biological Sciences examines the ways in which the federal government uses scientific information in reaching policy decisions, providing case studies of the interactions between science and government on different biomedical, biological, and environmental issues. These case studies document a broad range of complex issues in science policy--from the Human Genome Project to tobacco regulation--and provide an accessible overview of both the science behind the issues and the policy-making process.
