This NEW volume of the Controversies in Science and Technology series explores five of the most controversial scientific issues facing our world today. This collection of informative and engaging essays addresses stem cell research, information technology, space exploration, global warming, and biology and gender. These issues challenge our beliefs about each other, our planet, societal fairness, the concept of "knowing," and the definition of human life itself - these issues reach into our minds, hearts, and souls. Before making judgments and decisions that affect society we must first empower ourselves with all the knowledge and facts available. Every citizen should educate themselves and contribute to the ongoing debates involving these groundbreaking scientific and technological discoveries and advances.
