What is a self? Does it exist in reality or is it a mere social construct- or is it perhaps a neurologically induced illusion? The legitimacy of the concept of the self has been questioned by both neuroscientists and philosophers in recent years.

Countering this, in *Subjectivity and selfhood*, Dan Zahavi argues that the notion of self is crucial for a proper understanding of consciousness.

He investigates the interrelationships that non of these three notions can be understood in isolation.
