Sinopsis

ISBN: 9780262201728

This a book about sciencie, technology, and love, writes Sherry Turkle. IN it, we learn how a love for science can start with a love for an object -a micro- scope, a modern, a mud pie, a pair of dice, a fishing, rod.

Objects fire imagination and set young people on a path to a career in sciencie. In this collection, distinguished scientists, engineers, and designers as well as twenty-five years of MIT students describe how objets encountered in childhood became part of the fabric of their scientific selves. In two major essays that frame the conllection, Turkle tells a story of inspiration and connection through objects that is often neglected in standard sciencie education and in our preoccupation with the virtual.
