Sinopsis

ISBN: 9780821821145

Bloch (mathematics, U. of Chicago) warns readers that subsequent work has totally changed the landscape into which his emerged as a lecture series in 1987 at the University of California in Irvine. The 11 lectures provide an entry point to several intimately connected new branches of arithmetic algebraic geometry, such as regulators and special values of L-functions of algebraic varieties. The lucky few with the aging typewritten notes will no longer be able to loan them out over the weekend in exchange for a bottle of really nice wine.
