Internet-Enabled Handheld Devices, Computing, and Programming: Mobile Commerce and Personal Data Applications comprehensively reviews the state of handheld computing technology and application development, with coverage of such cutting-edge topics as Advanced Wireless Markup Language and J2ME programming. Uniquely focused on innovations that can drive mobile commerce and personal information management to new levels of utility and added value, this book provides a much-needed resource for academics and students engaged in mobile-technology research. It will also guide the efforts of developers and managers in industry seeking to maximize the evolving commercial opportunities presented by the current generation of internet-enabled handheld devices.
