Sinopsis

ISBN: 9781599048574

The use of information technology in the public sector has been an increasingly prominent international trend. With this rapid expansion comes many issues, challenges, and concerns relating to the application of public information technology.

The Handbook of Research of Public Information Technology compiles 76 authoritative contributions from 120 of the world's leading experts on the global trend toward the rapidly increasing use of information technology in the public sector. Discussing such issues as e-government and e-commerce; project management and information technology evaluation; system design and data processing; security and protection; and privacy, access, and ethics of public information technology, the Handbook of Research of Public Information Technology is a must-have for all academic, research, and public administration libraries.
