Sociologists Brewer (emeritus, Trinity College, Hartford, CT) and Hunter (Northwestern U.) look at the uses, implications, and evolving nature of multimethod research, or combining different styles or methods in the same research project. Based on a text first published in 1989, when single-method research was the standard, the volume provides a history of multimethod research; compares and contrasts research methods to help students determine which may be right for their project; addresses the postmodern critique of science and examines how it's articulated and evaluated today; and includes examples from academic journals of research designs in action.
