Sinopsis

ISBN: 9780821849033

In this work the authors deal with linear second order partial differential operators of the following type $H = \partial_t - \sum_{i,j=1}^q a_{ij}(t,x) X_i X_j - \sum_{k=1}^q a_k(t,x) X_k - a_0(t,x)$ where X_1, X_2, \dots, X_q is a system of real Hörmander's vector fields in some bounded domain $\Omega \subset \mathbb{R}^n$, $A = \left(a_{ij} \right)_{i,j=1}^q$ is a real symmetric uniformly positive definite matrix such that $\lambda^{-1} |\xi|^2 \leq \sum_{i,j=1}^q a_{ij}(t,x) \xi_i \xi_j \leq \lambda |\xi|^2$ for all $\xi \in \mathbb{R}^n$, $\forall \Omega, t \in (T_1, T_2)$ for a suitable constant $\lambda > 0$ and some real numbers $T_1 < T_2$.

Table of Contents

Introduction

Part I: Operators with constant coefficients

Overview of Part I

Global extension of Hörmander's vector fields and geometric properties of the CC-distance

Global extension of the operator H_A and existence of a fundamental solution

Uniform Gevrey estimates and upper bounds of fundamental solutions for large $|x-y|$
Fractional integrals and uniform L^2 bounds of fundamental solutions for large $|x-y|$

Uniform global upper bounds for fundamental solutions

Uniform lower bounds for fundamental solutions

Uniform upper bounds for the derivatives of the fundamental solutions

Uniform upper bounds on the difference of the fundamental solutions of two operators

Part II: Fundamental solution for operators with Hölder continuous coefficients

Assumptions, main results and overview of Part II

Fundamental solution for H: the Levi method

The Cauchy problem

Lower bounds for fundamental solutions

Regularity results

Part III: Harnack inequality for operators with Hölder continuous coefficients

Overview of Part III

Green function for operators with smooth coefficients on regular domains

Harnack inequality for operators with smooth coefficients

Harnack inequality in the non-smooth case

Epilogue
