In this paper the author classifies symplectic actions of 2-tori on compact connected symplectic 4-manifolds, up to equivariant symplectomorphisms. This extends results of Atiyah, Guillemin-Sternberg, Delzant and Benoist. The classification is in terms of a collection of invariants of the topology of the manifold, of the torus action and of the symplectic form. The author constructs explicit models of such symplectic manifolds with torus actions, defined in terms of these invariants.

Table of Contents

Introduction

The orbit space

Global model

Global model up to equivariant diffeomorphisms

Classification: Free case

Orbifold homology and geometric mappings

Classification

The four-dimensional classification

Appendix: (sometimes symplectic) orbifolds
