Edición: 1^a

Sinopsis

ISBN: 9780821852583

Using an analogue of Makanin-Razborov diagrams, the authors give an effective description of the solution set of systems of equations over a partially commutative group (right-angled Artin group) \mathbb{G} . Equivalently, they give a parametrisation of $\mathrm{Hom}(G, \mathbb{G})$, where G is a finitely generated group.

Table of Contents

Introduction

Preliminaries

Reducing systems of equations over \mathbb{G} to constrained generalised equations over \mathbb{F}

The process: Construction of the tree T

Minimal solutions

Periodic structures

The finite tree $T_0(\Omega)$ and minimal solutions

From the coordinate group $\mathbb{G}_R(\Omega^{**})$ to proper quotients: The decomposition tree $T_{\mathrm{dec}}(\Omega)$ and the extension tree $T_{\mathrm{ext}}(\Omega)$

The solution tree $T_{\mathrm{sol}}(\Omega)$ and the main theorem

Bibliography
