Sinopsis

ISBN: 9780071342605

As a sequel to the bestselling *The True State of the Planet* and aimed at general-interest readers and published to coincide with Earth Day, this lively collection calmly and accurately assesses the ecological state of our planet. In ten essays, authorities from NASA, the University of Chicago, the World Bank, and other prestigious institutions probe what we do and don't know about key environmental and health-related issues -- and offer sensible solutions to the real problems we do face.
