Sinopsis

ISBN: 9788847025912

It is the first time a comprehensive survey of Magenes' activity in Mathematics is presented. Although from a particular point of view, it is a general perspective of the research in Partial Differential Equations and their applications developed in Italy in the period 1950-2000.

It shows the far reaching consequences that ideas, methods, techniques originally set forth by Magenes and his school still have on Mathematics today.

This volume is a selection of contributions offered by friends, collaborators, past students in memory of Enrico Magenes. The first part gives a wide historical perspective of Magenes' work in his 50-year mathematical career; the second part contains original research papers, and shows how ideas, methods, and techniques introduced by Magenes and his collaborators still have an impact on the current research in Mathematics.

Content Level » Research

Keywords » Applications - Calculus of Variations - Numerics - Partial Differential Equations

Related subjects » Computational Science & Engineering - Dynamical Systems & Differential Equations - Mathematics
