Sinopsis

ISBN: 9780691048338

This elegant book by distinguished mathematician John Milnor, provides a clear and succinct introduction to one of the most important subjects in modern mathematics. Beginning with basic concepts such as diffeomorphisms and smooth manifolds, he goes on to examine tangent spaces, oriented manifolds, and vector fields. Key concepts such as homotopy, the index number of a map, and the Pontryagin construction are discussed. The author presents proofs of Sard's theorem and the Hopf theorem.

TABLE OF CONTENTS:

Preface	
1 Smooth manifolds and smooth maps	1
Tangent spaces and derivatives	2
Regular values	7
The fundamental theorem of algebra	8
2 The theorem of Sard and Brown	10
Manifolds with boundary	12
The Brouwer fixed point theorem	13
3 Proof of Sard's theorem	16
4 The degree modulo 2 of a mapping	20
Smooth homotopy and smooth isotopy	20
5 Oriented manifolds	26
The Brouwer degree	27
6 Vector fields and the Euler number	32
7 Framed cobordism; the Pontryagin construction	42
The Hopf theorem	50
8 Exercises	52
App Classifying 1-manifolds	55
Bibliography	59
