Sinopsis

ISBN: 9781849802703

This excellent collection of articles by leading scholars in a variety of natural resource policy fields examines cases in participation, horizontal and vertical co-ordination, and the role of science and expertise in environmental policy formation. The legitimacy and effectiveness of each of these key components of governance and meta-governance regimes is assessed in important areas such as climate change and parks and wilderness preservation. The volume brings an admirable consistency of focus to the analysis of new governance modes in environmental policy and sheds new light upon important recent trends and developments in the area.'

- Michael Howlett, Simon Fraser University, Canada

Contents

Contributors: S. Beck, M. Böcher, T.E. Boon, L. Giessen, K. Hogl, K. Kassioumis, M. Krott, E. Kvarda, D.H. Lund, I. Nathan, J. Newig, R. Nordbeck, K. Papageorgiou, M. Pregernig, S. Storch, M. Vakkas, S. Weiland

Further information

'An imaginative and stimulating collection of essays that makes an indispensable contribution to the literature on forest and environmental policy and governance.'

- David Humphreys, The Open University, UK

'This is a very timely, relevant and interesting volume. Environmental problems are pertinent problems, as the book rightly states, so we need continuous attention and effort to analyse and apply environmental governance modes. Although urgently needed, their effectiveness and legitimacy are neither straight forward nor given. Therefore, a thorough in-depth analysis of these modes, their characteristics and their pros and cons is very helpful, both for academics and policy makers. This is exactly what this book offers.'

- Bas Arts, Wageningen University and Research Centre, The Netherlands

'This excellent collection of articles by leading scholars in a variety of natural resource policy fields examines cases in participation, horizontal and vertical co-ordination, and the role of science and expertise in environmental policy formation. The legitimacy and effectiveness of each of these key components of governance and meta-governance regimes is assessed in important areas such as climate change and parks and wilderness preservation. The volume brings an admirable consistency of focus to the analysis of new governance modes in environmental policy and sheds new light upon important recent trends and developments in the area.'

- Michael Howlett, Simon Fraser University, Canada

Environmental policy making has become an experimental field for new modes of governance. This timely book focuses on three prominent characteristics of new governance arrangements: the broad participation of non-state actors, the attempt to improve vertical and horizontal coordination, and the effort to integrate different types of expertise in an effective and democratically accountable way.

Building on the analytical perspectives of legitimacy and effectiveness, which are seen as genuine acid test criteria for new governance, this book provides a critical assessment of current practices of participation, coordination and evidence-based policy making in various case studies of environmental governance, in particular in the fields of biodiversity, climate and forest policy.

The book provides insights from selected governance processes that go beyond consultancy-style best-practice examples but are embedded in a solid conceptual and theoretical discussion that will be invaluable to policymakers. It will also prove essential for scholars interested in environmental politics; policy studies; public policy; public administration; European politics; as well as science and technology studies.
