Sinopsis

ISBN: 9783540213451

The book covers both theory and applications of locational analysis (LocAn). The reader will see the power of LocAn models in various real-world contexts varying from communication design, robotics, mail delivery, etc. As such it is a valuable source for practitioners, lecturers and students. The book is divided into two parts: The first part contains chapters in which an overview of some of the LocAn methodologies is given. The second part describes in more detail some selected applications. The book is well-suited as source for a graduate course, but also for students, lecturers and practitioners who want to learn about LocAn through self-study. It gives researchers a state of the art review of available location models.
